

Our Forestry Philosophy...

Forestry is a constant and ongoing process of dealing with change in all our urban and wild places—as people overwhelm the landscape. We are here to provide technical expertise to help find practical ways to promote the restoration of forests everywhere—we have a hand in the soil, sunshine on our necks, and we know the country because, you name it, we've been there. East-West brings the best of hi-tech, forest ecology, biology and practical experience to stewardship of our valuable natural resources. Our job today is to enhance the value of those resources which will be so priceless tomorrow.

Our History and Approach to Business

EWFA was established in 1983 to consolidate the varied skills and expertise of a core group of ecologically-minded natural resource professionals. We joined Forest Data Corp. in 1996. Today we have five employees, a variable number of seasonal recruits, and a large network of expert consultants. By keeping our overhead low, we can offer competitive rates for exceptionally high quality services.

Who We Are

Forest Data Corp. does business as East-West Forestry Associates, Inc. We are a socially responsible consulting firm dedicated to restoring and sustaining the vitality and diversity of forests and watersheds in the U. S. and in communities around the globe. We do this by combining accurate field assessments, high technology and marketing with the highest standard of professional land conservation and stewardship. This approach integrates the most powerful tools available today to conservation professionals, land use planners and natural resource managers.
